

Technovit® 4021

Universal, odor-free cold mounting resin
from the specialist Kulzer Technik

*Technovit 4021 is a novel, odor-free
2-component mounting compound based
on a high-molecular special monomer
for materialographic mountings.*

⊕ MMA-/THFMA-free

Technovit® 4021

The homogeneous black pigmentation provides a very good contrast to most materials for both macroscopic and microscopic evaluations.

This powder/liquid system is absolutely odor-free thanks to the absence of methyl methacrylates (MMA), contains NO tetrahydrofurfuryl methacrylate, styrene or similar products and therefore no reprotoxic ingredients. Importance was attached to the use of pollution-reduced constituents also in the choice of the other components.

Technovit 4021 thus satisfies all the requirements for a modern mounting compound

Technovit 4021 is a quick product and very efficient thanks to its short polymerisation time of only 5 minutes. Even fine specimen geometries are filled well due to its low viscosity.

The mixing ratio of 2 parts liquid to 3 parts powder can be set by simple dosing using a measuring spoon – exact weighing is not necessary. That all makes **Technovit 4021** a product

that, in addition to the high reproducibility of the embedding, offers a high level of safety at the workplace due to its easy handling. Furthermore, the product does not emit any harmful substances and can therefore be used without an extractor hood – ideal for routine mountings e.g. during production.

Thanks to the new formula, **Technovit 4021** cures almost bubble-free, eliminating the need for a pressure pot.

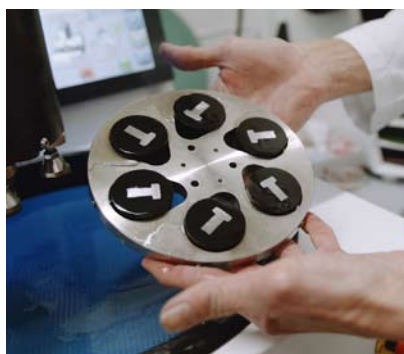

Technovit 4021 was developed as a universal mounting compound. Moderate polymerisation temperatures and minimum gap formation allow a wide range of preparation applications suitable for a broad spectrum of material specimens.

The easy machining and good abrasion resistance ensure easy, flat specimen preparation with sharp edges for the vast majority of materials. The cleaning of the specimen with water-based agents is very quick and simple.

Technovit 4021 is a modern mounting compound:

- no health risk
- odor-free
- quick and uncomplicated
- bubble-free
- inexpensive

A must-have for every laboratory – see for yourself!
